Risk warning

Before you begin trading on Real account please carefully consider your investment goals, risk and experience you have. It should be noted that Forex is a leverage based market. It should be remembered that leverage can work both in your advantage and disadvantage as well. Therefore there is high risk of losing a part or all of your financial input placed on your account and because of that you should remember to trade with the amount of money which you can lose without taking any influential financial damage.

- Restart your MT4

Trading Modes

System provides three different trading styles (templates) depending on your expectations, risk appetite and experience in trading.

FXMASTERY1

It's characterized by the fastest signals as well as the largest potential profit with increased risk. If you are familiar with scalping and catching the quick market movements, you should choose this trading mode.

Scalping mode is recommended for advanced traders.

FXMASTERY2

Is the most universal mode, providing the most balanced signals.

It provides stable signals with limited risk.

This mode is recommended for beginners as well as experienced traders.

FXMASTERY3

Provides the most secure signals, with less profit potential at the same time. Pick this mode if you want to spend the minimum amount of time in front of the computer.

This mode is recommended for every type of trader.

- System is ready for trading

System overview

System contains four indicators.

1. Entry/Exit Indicator.
2. Trend Filter.
3. Daily Range.
4. Trading assistant.

HOW DOES IT WORK.

Entry Examples

SELL TRADE

Wait for a white diamond on the chart. When it will appear (1) check if it's in line with the market trend (2). If both agree it's a valid sell signal.

Stop Loss should be placed above last swing high.

There are few ways to close the trade.

- You can wait for opposite signal
- Use Risk to Reward ratios
- Support and Resistance levels
- Round Numbers

Etc.

HOW DOES IT WORK.

Entry Examples.

BUY TRADE

Wait for a blue diamond on the chart. When it will appear (1) check if it's in line with the market trend (2). If both agree it's a valid buy signal.

Stop Loss should be placed below last swing low.

Similar to the SELL setup wait for an opposite signal to come or use your own exit technique.

Daily Range

Daily range indicator calculates range based on the last 1/5/10/20/50 days. It also displays the average of those on the bottom (blue color).

Before taking a signal, please check how much space is left on this pair. On this example we can see 60 pips range today, while the average is 87. It means that there is around 30 pips more range today.

If 'today' number is higher than the average (for example today:100, average:90) it means that such trade is more risky.

Trading Assistant

System contains also a trading assistant indicator. (you can use it also with your own indicators).

You can open and close your trades with one click using Buy/Sell/Close buttons.

Lot – determines the lot size when opening a new trade.

Pips R – means stop loss size (in pips). As some traders do not use SL, it's disabled by default (you need only to get into expert settings and change 'Use Stop Loss to: True' to make it work).

S R – means the risk on trade (money wise)

%R – means the risk on the trade based on the account size

TP – determines the take profit in pips.
