

FX SHOCK

System Manual

Risk warning

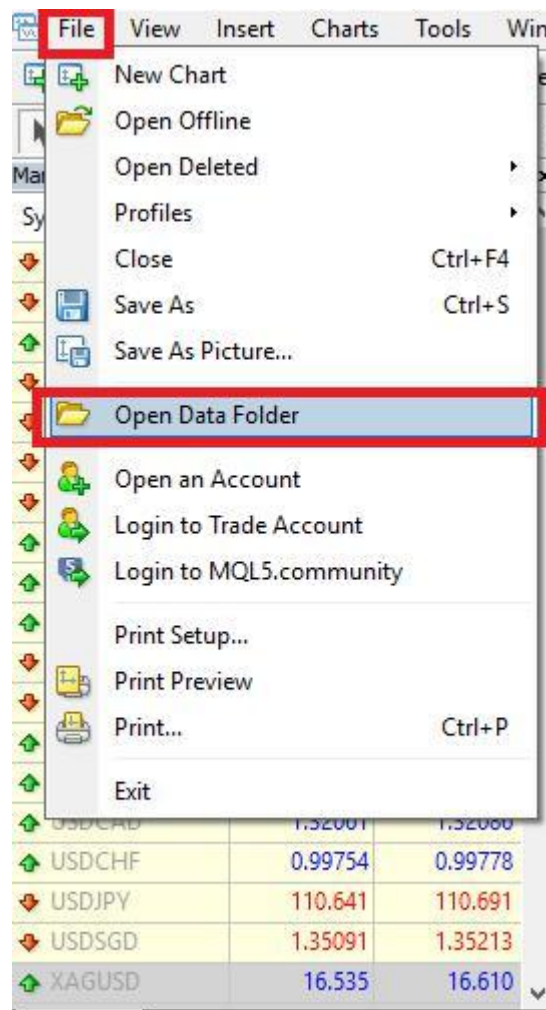

Before you begin trading on Real account please carefully consider your investment goals, risk and experience you have. It should be noted that Forex is a leverage based market. It should be remembered that leverage can work both in your advantage and disadvantage as well. Therefore there is high risk of losing a part or all of your financial input placed on your account and because of that you should remember to trade with the amount of money which you can lose without taking any influential financial damage.

- Restart your MT4

- Open your favourite chart. Press the right mouse button and pick FXSHOCK template.

FXSHOCK_DAYTRADING

Is the most universal mode, providing the most balanced signals.

It provides stable signals with limited risk.

This mode is recommended for beginners as well as experienced traders.

FXSHOCK_SCALPING

It's characterized by the fastest signals as well as the largest potential profit with increased risk. If you are familiar with scalping and catching the quick market movements, you should choose this trading mode.

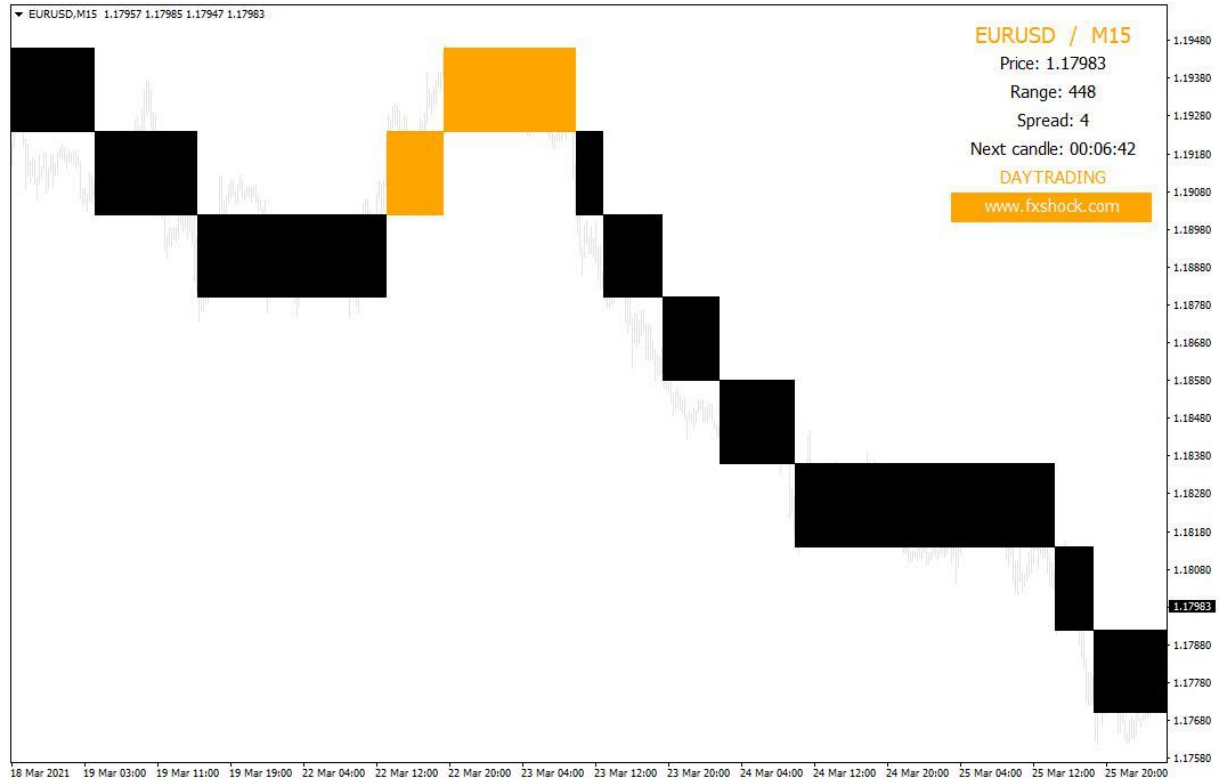

Scalping mode is recommended for advanced traders.

FXSHOCK_SWINGTRADING

Provides the most secure signals, with less profit potential at the same time. Pick this mode if you want to spend the minimum amount of time in front of the computer.

This mode is recommended for every type of trader.

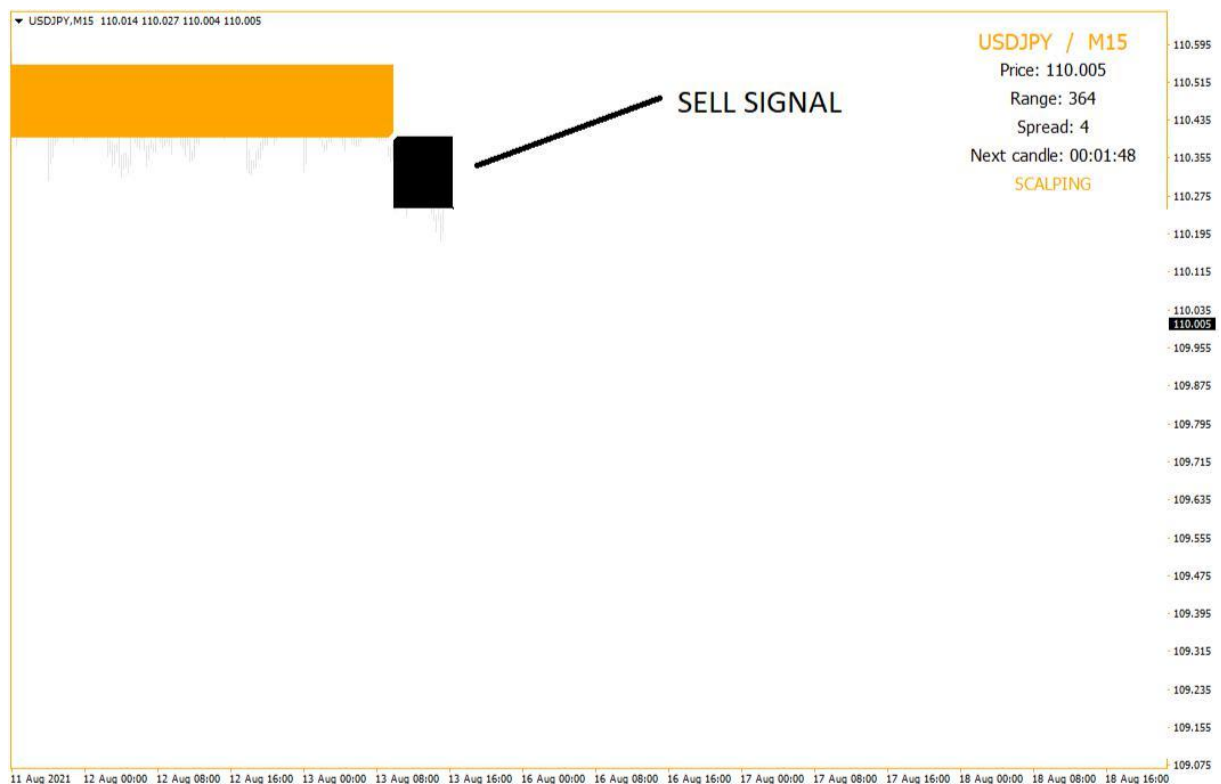

- System is ready for trading

ENTRY EXAMPLE (SIMPLE MODE)

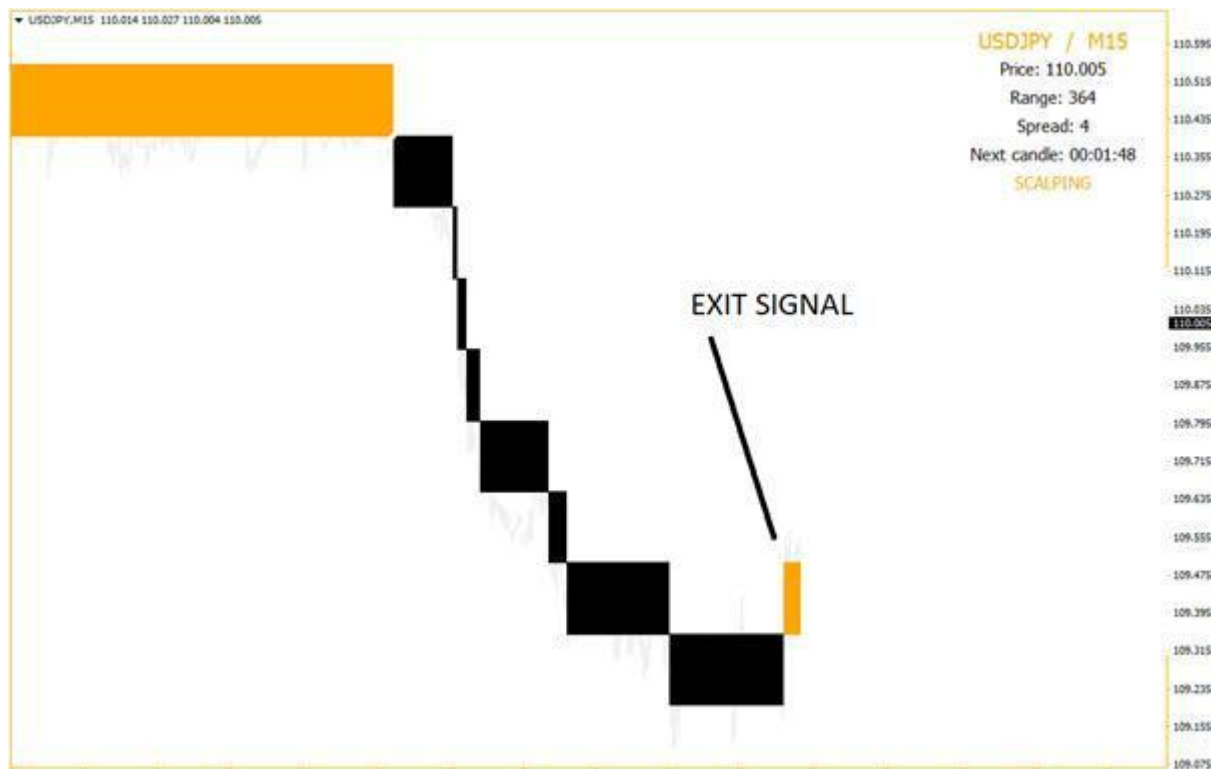

Entry signal is produced, when system prints the box of the opposite color.

We can see on the below example the first black box, it's a valid sell signal.

EXIT (SIMPLE MODE)

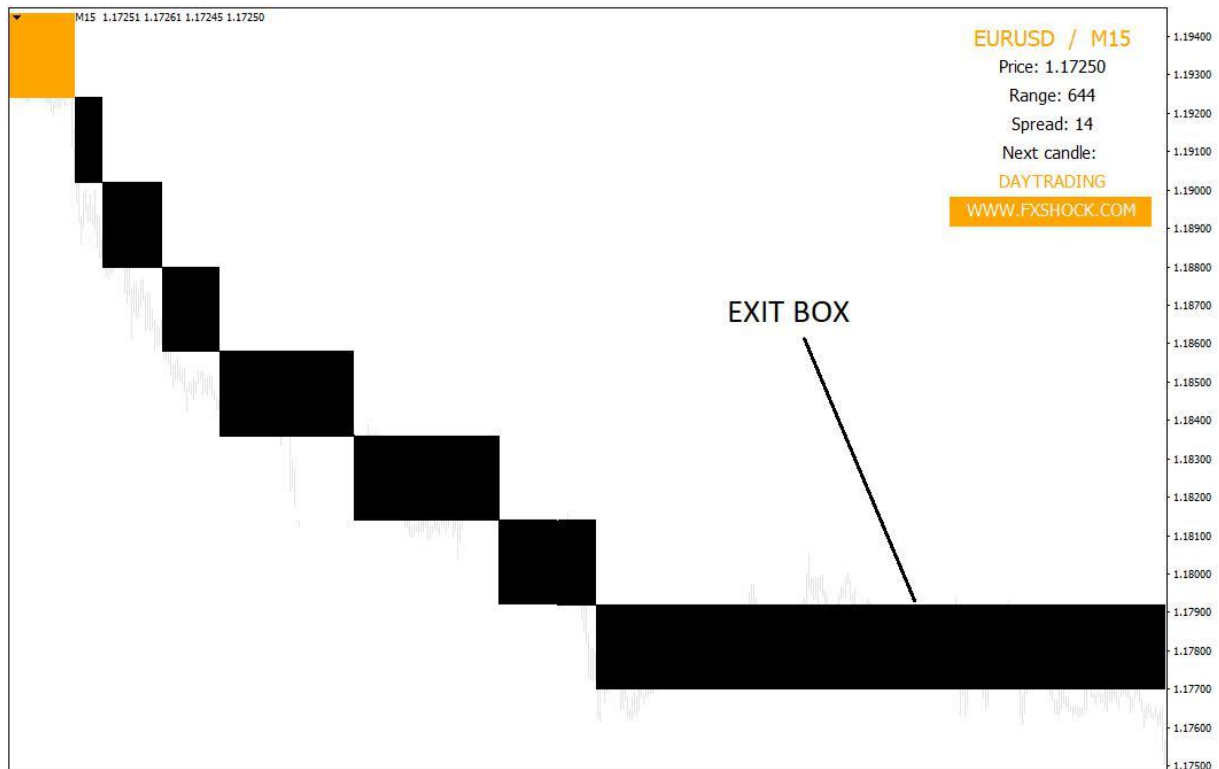

Use the opposite signal to close the trade.

EXIT (ADVANCED MODE)

You can also use more advanced exit mode, just watching the boxes that are produced by the system. If you will see a large, wide box (that is simply market consolidation) you can use it for faster exit.

If the boxes are narrow it means that the market moves fast and you can expect larger profit potential.

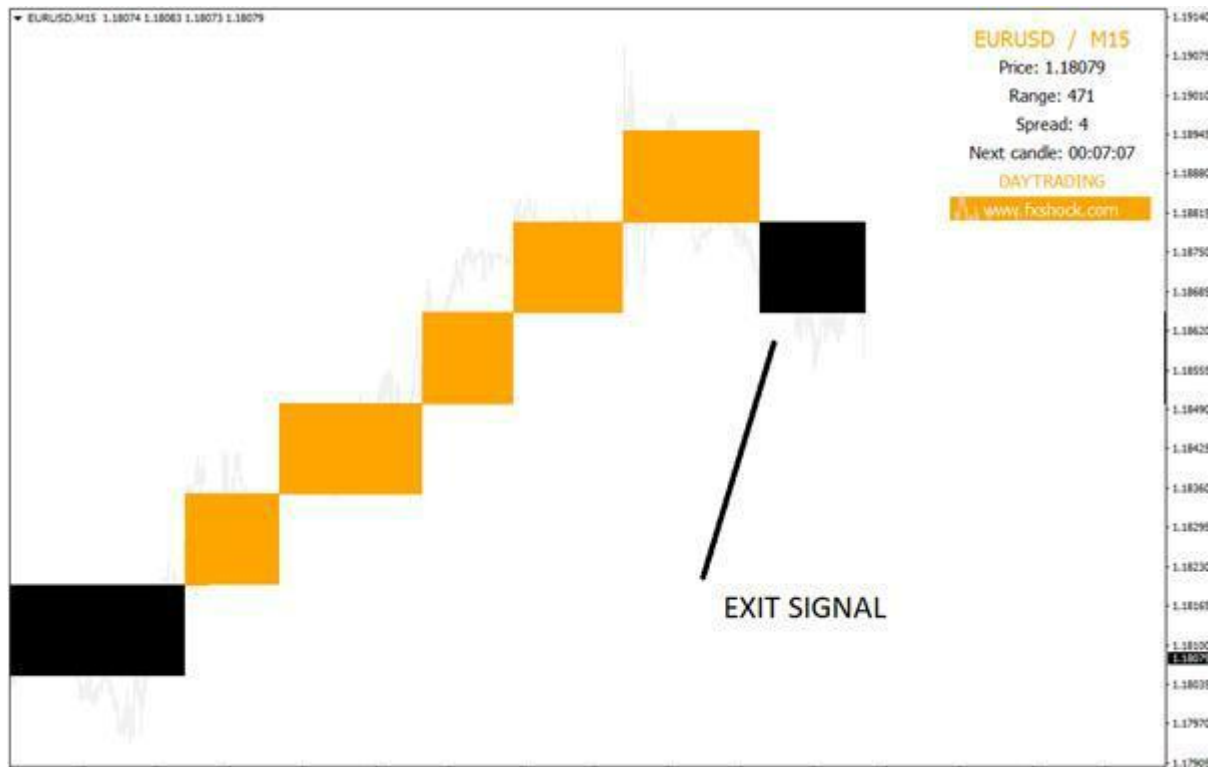

ENTRY EXAMPLE (SIMPLE MODE)

Buy signal works in similar way. Just wait for an opposite color box to form and enter with BUY order.

EXIT (SIMPLE MODE)

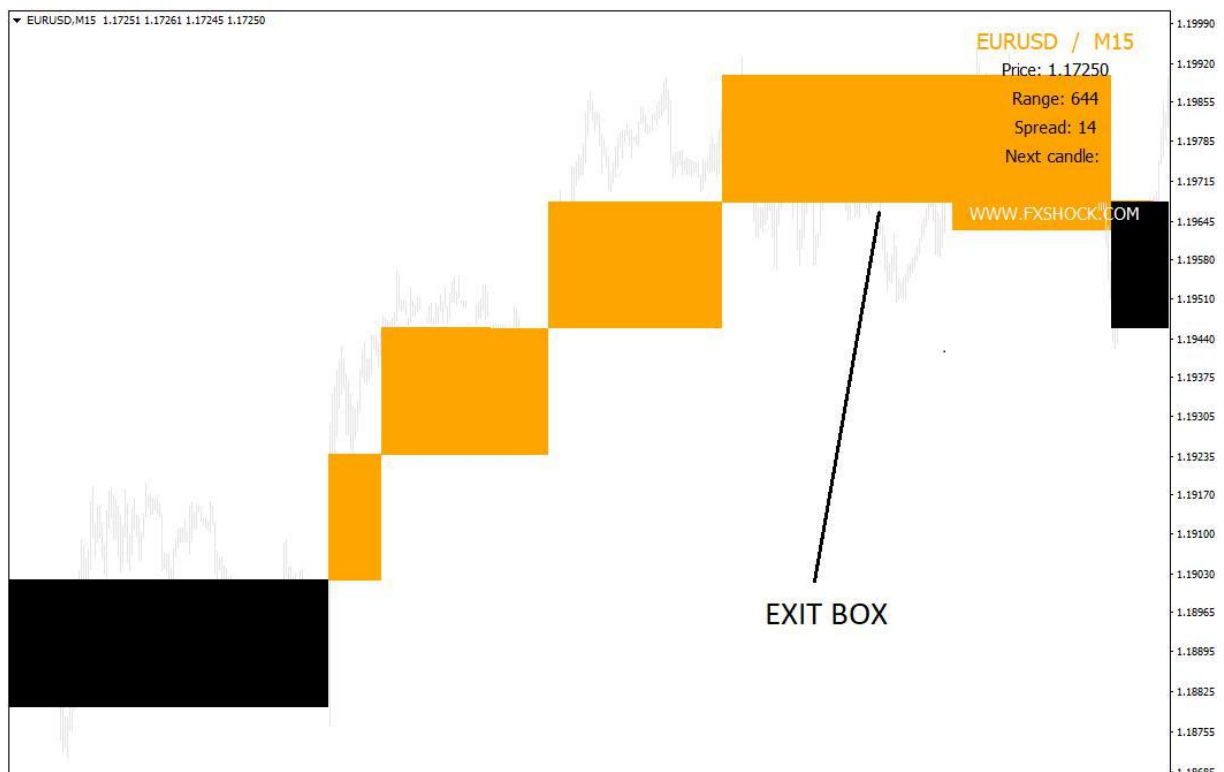

Use the opposite signal to close the trade.

EXIT (ADVANCED MODE)

If the market goes into consolidation (wide box), you can use this as exit signal.

We recommend to watch the price if the market slows down (it can be expecting some heavy news) and it's better to secure profit faster.

ALERT FEATURE

Alert feature works a bit differently than standard buy/sell alert.

It will inform you about ANY new box that is formed.

(DOWN BOX – SELL SIGNAL / UP BOX – BUY SIGNAL).

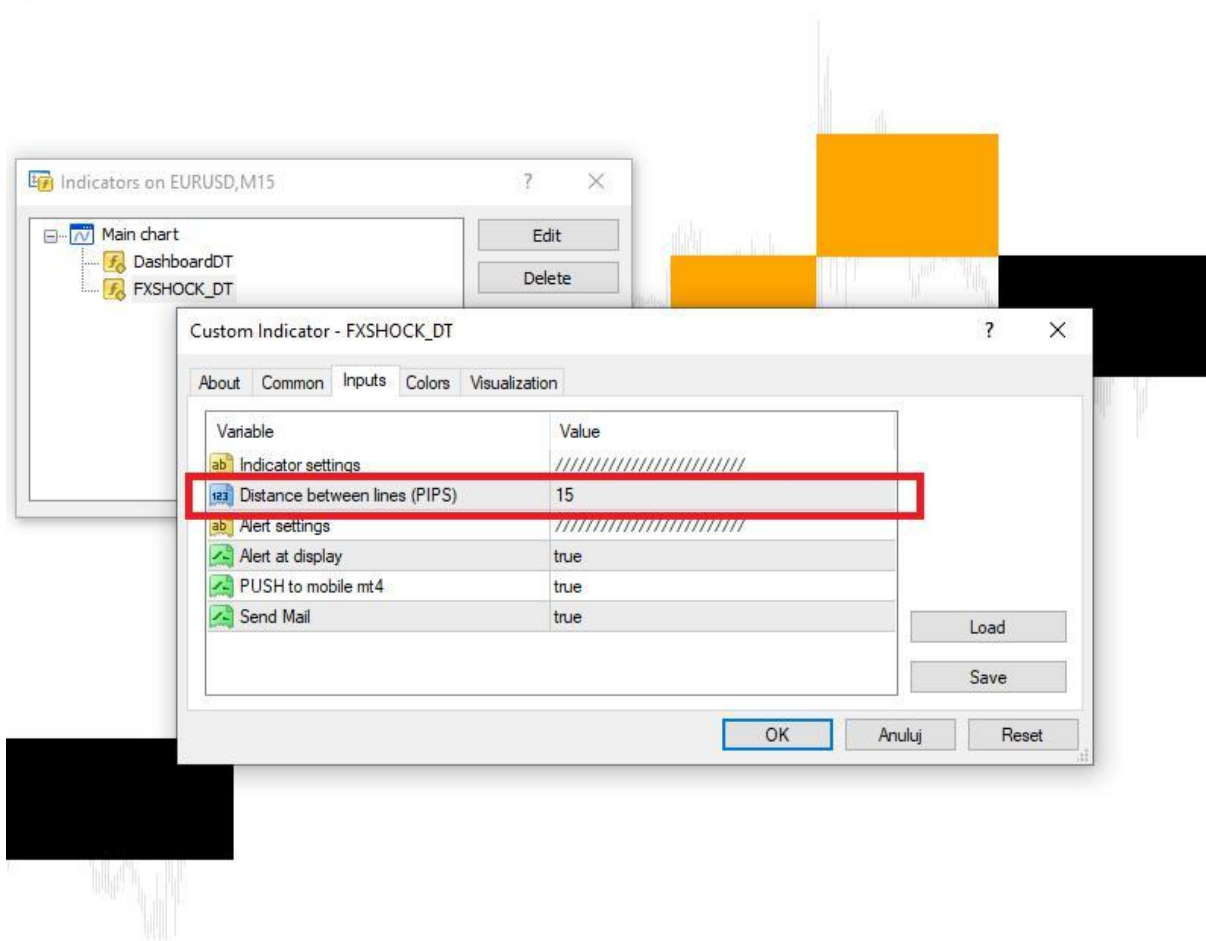

just to let you know that the market is moving and it is a good time to take a look how your trade looks like and if it's a good moment to close the trade (consolidation).

This feature is also very useful for traders who want to re-entry when a strong trend is formed.

TWEAKING THE SETTINGS (PIPS WISE)

The software provides 3 trading modes by default, but if you need faster/slower signals (also more aggressive or just very conservative) you can change the value of the blocks in the indicator settings.

▼ EURUSD,M15 1.18076 1.18085 1.18073 1.18084

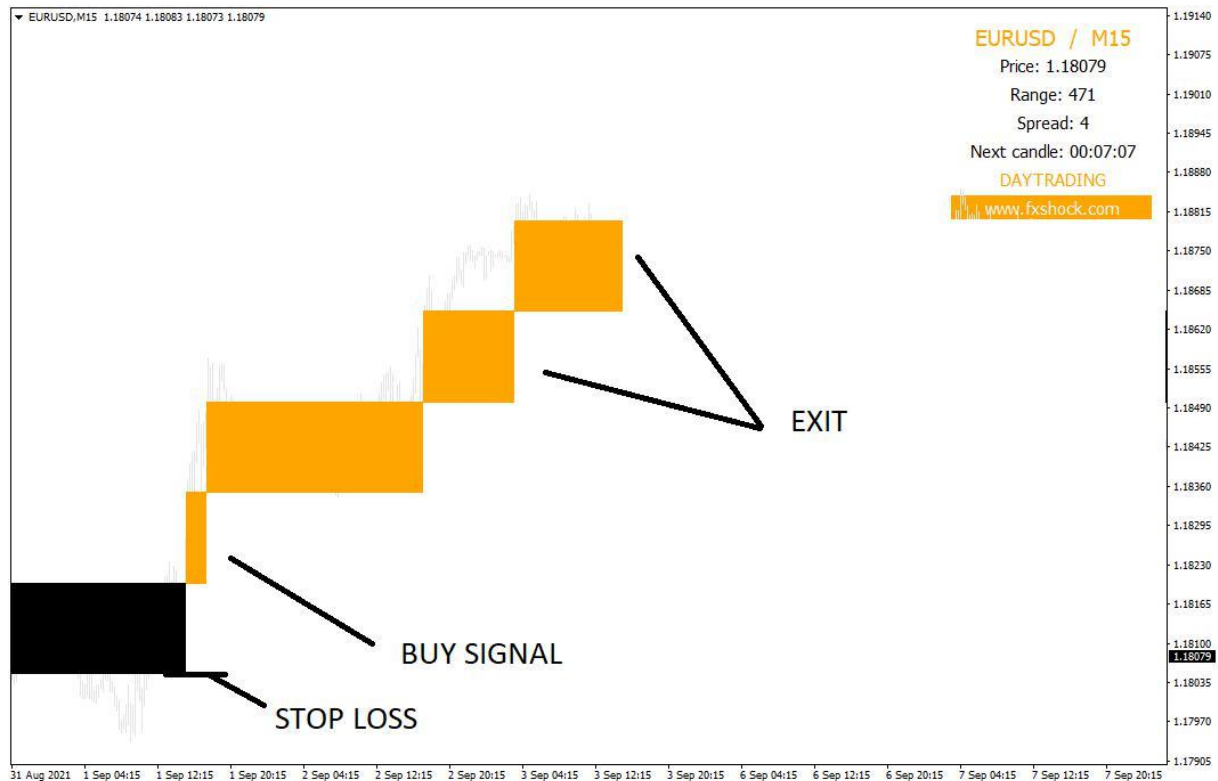

If you need faster signals, just lower this value. If you prefer slower signals and very conservative trading, you can increase this value.

The values provided by the templates are good enough for any type of trader, but there are some traders that expecting much faster signals (extreme scalping), or just the opposite - they do not have much time for watching the trades.

For example: if you are positional trader, you can increase pip value to 100 and watch the charts only few times a month.

STOP LOSS

Recommended stop loss should be placed below/above entry box.

You can also use a different, but also good technically place like:

- at the round number
- close to important support/resistance area.
