

POLYGON FOREX SCALPER

indicator with automatic adaptation to
current market conditions

POLYGON FOREX SCALPER

Easy Pips BUY/SELL Metatrader Indicator!

What makes Polygon Scalper so powerful? We built Polygon Scalper for a trading strategy that has been around for decades ...

We did not use exotic or speculative methods - instead, we explored strategies that professional fund managers ... or what insiders call Smart Money.

The strategy has been tested, tested, finalized and re-tested to make sure that we have the most powerful and reliable tool on the market.

Polygon Scalper is programmed to automatically adapt to current market conditions.

We know that there are no two identical trading sessions, and your trading strategy should adapt to the market.

Polygon Scalper uses an advanced polynomial algorithm that adjusts system parameters in real time.

Let me explain in detail how the system works ...

Polygon Forex Scalper trading logic is very easy to understand for any trader. Whatever your shopping experience.

Polygon uses statistical analysis to determine the future direction of the market (bull market / bear market) and find the optimal entry point into the market.

A very simple and clear graphic diagram will show you which market you are dealing with, as well as where to buy and sell at the same time.

Blue background - we trade only blue buy signals. Ignore any red sell signal.

Red background - we trade only red sell signals. Ignore any blue buy signal.

POLYGON SCALPER RULES AND EXAMPLES OF TRADE

The rules for entry, stop loss and take profit in Polygon Forex Scalper are very simple even for beginners.

- A buy signal appears when the background is colored blue and a blue arrow appears on the chart.

- A sell signal appears when the background is colored red and a red arrow appears on the chart.
Market status is based on the most relevant color background.
- A purchase is made only when the background is blue.
- Sell only when the background is painted red.

BUY TRADE example (AUD / CAD, chart M1)

Buy Trading Rules

- The background should be blue.
- The BLUE arrow appears on the chart.
- Come on a long time.
- Place a stop loss below the previous swing low.
- Take profit in the risk reward ratio is 1: 3 or better (for example, risking 15 points, getting 45 points).
- We ignore any red arrows when the background is blue!
Therefore, if you opened a buy transaction when it worked, you would close it with a profit of 64 pips.

Example SELL TRADE (GBP / USD, chart M5)

Sell Trading Rules

- The background should be red.
 - The RED arrow appears on the chart.
 - Short
 - Place a stop loss above the previous swing high.
 - Take profit at a risk-reward ratio of 1: 3 or better (for example, risking 20 points to get 60 points).
 - We ignore any blue arrows when the background is red!
- Therefore, if you opened a sell deal when it worked, you would close it with a profit of 68 pips.
